Innovation is your moto ....  
Think about ERMO

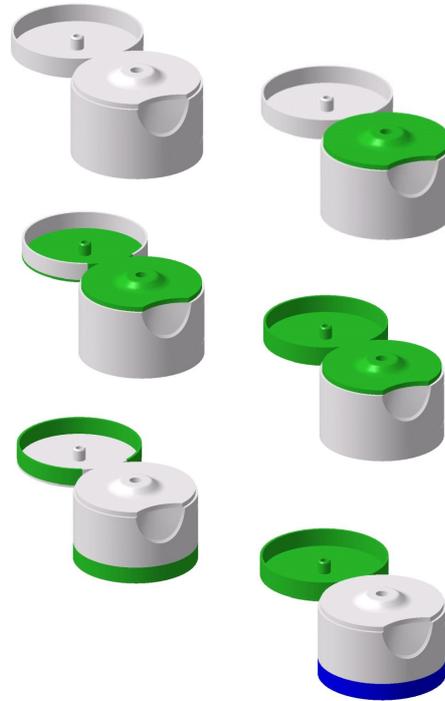

## ERMO News : K07 Special Edition#2

Kshow is the right place to show up the very best. This is a real good opportunity to see how wide are the possibilities for packaging customization.

A very good way to do it is with multi-component technologies. It does open deep spaces for new ideas, as soon as the mold is considered as a key point in the development process.

New products have strict criterias in order to get highlights on the market:

- Design recognition (branding and eye catching)
- Multi-function products (proofing, easy to open ..)
- Assembly process reduction for cost efficiency

More Information : <http://www.ermo-group.com>

### Flip Top and Caps & closures

In order to avoid any additionnal process after injection, focus points on any projects are product weight and cycle time reduction, In Mold Assembly process and integration of product features (using multi-component technologies).

### Medical packaging

Bacteria proof, Child proof, Senior friendly ... it's now becoming more and more complex. To prevent from any risk of outside contamination, medical packaging are now becoming multi-fonctionnal, integrating multi-component technologies (bi-material or tri-material.)

### Rigid food packaging

Thinner, faster and nicer ... these are the trends. With always more challenging requests, Ermo and Caulonque are now working together. Offering to global customers with worldwide projects, very well skilled teams and wide manufacturing capabilities. As a complement, a technical center in Canada (Exacad), will provide maintenance, repair and any technical assistance for the American market.
